14 Apr 2025 | 🗓 Software Design

Attendees: Jayden Harold   Tariro Muvevi   Karabelo Borotho   Dylan Naidoo
Karabo Bopape

Notes
- After facing issues with Azure SQL Database, we transitioned to Google Firebase and FireStore.
- Connected Firebase with Google OAuth credentials.
- Edited app.js for the following functionality:
  - After registering or logging in, based on the user's role, they should be taken to the relevant and correct dashboard
  - The dashboard now displays after a user signs up
- The Database automatically adds a user to the database when they sign up successfully using Google.
- Prepared to present to Martin:
  - Need 5 screens in the lab for:
    - GitHub: Show that everyone is making commits and that Jest and GitHub Actions have been integrated.
    - Notion: Show the Scrum Board and that each task has been assigned and status tracked.
    - Green Smoke 1: A screen for the system administrator
    - Green Smoke 2: A screen for a resident
    - Green Smoke 3: A screen for a staff member
